

## Project Executable Files

|                      |                                                |
|----------------------|------------------------------------------------|
| <b>Date</b>          | 27 June 2026                                   |
| <b>Team ID</b>       |                                                |
| <b>Project Name</b>  | Smart Lender – Loan Approval Prediction System |
| <b>Maximum Marks</b> | 3 Marks                                        |

### Project Executable Files

This document lists the executable files, project structure, deployment details, and setup instructions for the Smart Lender – Loan Approval Prediction System. It ensures that the project can be easily executed, verified, and deployed by the evaluator.

### Step 1: Submission Checklist

| S.No | Item to Submit                                           | Submitted (Yes / No / NA) |
|------|----------------------------------------------------------|---------------------------|
| 1    | Complete source code (all files and folders)             | Yes                       |
| 2    | README / Setup Guide (instructions to run the project)   | Yes                       |
| 3    | requirements.txt / package.json / dependency file        | Yes                       |
| 4    | Database schema / seed files (if applicable)             | NA                        |
| 5    | Environment configuration file (.env.example or similar) | NA                        |
| 6    | Deployed application URL (if hosted)                     | Yes                       |

|    |                                                                 |     |
|----|-----------------------------------------------------------------|-----|
| 7  | APK / Executable binary (if applicable for mobile/desktop apps) | NA  |
| 8  | Dockerfile / Containerization config (if applicable)            | NA  |
| 9  | Test files and test results                                     | Yes |
| 10 | Demo video or walkthrough (if required)                         | Yes |

## Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

SMART LENDER/

```

|
|— static/
|   └─ style.css
|
|— templates/
|   └─ static/
|       └─ index.html
|
|— app.py
|— loan_prediction.csv
|— main.py
|— model_training.py
|— Procfile
|— README.md
|— requirements.txt
└─ smart_lender_model.pkl
  
```

## Step 3: Deployment / Access Details

| Field                              | Details                                                                                                                                                                             |
|------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hosted / Deployed URL</b>       | <a href="https://smart-lender-azpq.onrender.com">https://smart-lender-azpq.onrender.com</a>                                                                                         |
| <b>Login Credentials (Demo)</b>    | Not Required                                                                                                                                                                        |
| <b>Platform / Hosting Provider</b> | Render                                                                                                                                                                              |
| <b>Repository Link</b>             | <a href="https://github.com/228x1a0585-code/Smart-Lender.git">https://github.com/228x1a0585-code/Smart-Lender.git</a>                                                               |
| <b>Demo Video Link</b>             | <a href="https://drive.google.com/file/d/1CfQnjmoGmhRCsrJWIAI4QFcRpJDbXrS8/view?usp=sharing">https://drive.google.com/file/d/1CfQnjmoGmhRCsrJWIAI4QFcRpJDbXrS8/view?usp=sharing</a> |

#### Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Clone the GitHub repository.
2. Install dependencies using requirements.txt.
3. Run python app.py.
4. Open the application in a web browser.
5. Enter loan details and view the prediction.

**Step 5: Known Issues / Limitations**

| S.No | Known Issue / Limitation      | Workaround / Status          |
|------|-------------------------------|------------------------------|
| 1    | Public application (No login) | Intended for demonstration   |
| 2    | Uses historical dataset       | Can be updated with new data |
| 3    | Supports loan prediction only | Future enhancement           |

**Overall Description :-**

The Smart Lender – Loan Approval Prediction System includes all essential files required for execution and deployment. The project is organized with a clear folder structure, complete source code, trained machine learning model, dependency file, and deployment configuration. The application has been successfully deployed on Render and managed through GitHub, making it easy to execute, maintain, and evaluate.
